

The **NEW** PerforMax System

The Ultimate Whole House Water Filtration System

- Potassium water softening
- Removes chemicals and sediment
- Chlorine or Chlorine & Chloramine

Advanced Features Include:

1. **Counter-current regeneration:** More efficient bottom up flow regeneration.
2. **Soft water regulated brining:** Soft water is sent to the brine tank ONLY as needed.
3. **True variable brining:** System decides only how much resin to regenerate. Regenerates only what is needed. Normal systems regenerate 100%.
4. **User friendly electronics:** Set time of day and system does the rest. Hardness set during installation. 9-volt battery backup included.
5. **Real-time flow rates:** Push flow rate button to display real time flow rate in gallons per minute.
6. **Vacation mode:** Minimal regeneration every 2 weeks, just enough to keep the system fresh.
7. **Troubleshooting:** Shows systems activity history- such as how many days and gallons since the last regeneration.
8. **Factory programmed:** Everything is factory programmed except time of day and hardness.
9. **Consumer lockout option:** Prevents consumer from accidentally changing factory settings.
10. **24 GPM service flow:** Normal systems have 17 GPM service flow.
11. **1 ¼ inch connections:** Normal systems have 1 inch service connections.
12. **SB106 efficiency compliant:** USA Senate Bill 106 efficiency compliant. Meets future ecological guidelines today!
13. **Chloramine: 7x more costly filtration media:** The cost is \$40 per cubic foot for coconut carbon vs. \$300 per cubic foot for catalytic carbon. This is why chloramine removal is much more expensive.
14. **Both Chlorine & Chlorine/Chloramine Longer Contact Time:** Minimum 2 cubic feet of catalytic carbon for longer contact time than chlorine to remove chloramine. Plus the electronics ensure maximum contact time vs. other systems.
